Student Technology Fee
Grant Proposal Request Form
Fiscal Year 2008-09

PF

Comm.# 2

2009.025

Northwestern State University of Louisiana

#2

ALL BLANKS MUST BE FILLED COMPLETELY

Prepared by: Brenda R. Woodard For: Veterinary Technology Program

Department/Unit: Biological Sciences College: Science & Technology Campus: Natchitoches

Which NSTEP Goals/Objectives does this project meet? 1, 3, & 9

Requested equipment will be located/installed/housed? Building 090, Bienvenu Hall Room 302/A

Are department property policies and procedures in place for requested equipment? Yes

Which individual will be responsible for property control of the requested equipment?

Signature: Brenda R. Woodard Date: October 31, 2008

Grant Proposal Requested Amount: \$ 41,061.97 Budget Attached (circle one) YES/NO

Grant delivered to Student Technology located in Watson Library, Room 113. Date 10/31/2008

The grant proposal must include all specifications, description, model number, quotation, cost, state contract number, and vendor for each item. If the proposal does not include all requested information, it will be returned to requestor.

1. Describe target audience.

Veterinary Technology students are required to complete the veterinary surgery/anesthesia course in their last year. This course (VTEC 2200-2201 Veterinary Hospital Technology II) in many ways is a culmination of coursework completed in the Veterinary Technology curriculum, as it focuses on the patient from the time of presentation until the patient recovers from the surgical or dental procedure.

Students take a patient history, perform a physical examination, draw blood samples and run laboratory screening tests, set IV catheters, administer IV fluids and anesthesia, monitor the patient through the anesthetic recovery period, assist in a surgical procedure or dental prophylaxis procedure, stay with the patient until recovered from anesthesia, detail the patient's discharge summary, and prepare the surgical instruments and laboratory for subsequent procedures, all under the direct supervision of veterinarians and the registered veterinary technician. Students work in groups of 3-4 per animal procedure; enrollment in the laboratory is typically 18-28 students/semester. This is an intensive "hands-on" laboratory that prepares students for board examination and a career as a Registered Veterinary Technician.

2. Describe project/initiative for which you are requesting funds.

We are requesting funds to upgrade technology in the surgery/anesthesia laboratory. We need to update the desktop computer in the office area of this laboratory – this computer is loaded with veterinary practice management software and works as the “server” computer to twelve others in the clinical pathology laboratory and the computer laboratory. Linking these computers allows students to practice using this software as they will in the “real world” because the computer can be used to enter the patient record; the laboratory blood screening machines can report laboratory results directly to this computer. Our current computer is older and quite slow when performing these tasks.

Just released technology in blood chemistry analyzers will keep our clinical pathology laboratory at the current “state-of-the-art.” Since we received a grant last year to update this area for veterinary technology, most of our analyzers are representative of what is available in the workplace, but students will need instruction in the newest blood chemistry analyzer. This machine (IDEXX Catalyst DX Analyzer) will be used for pre-anesthetic screening for liver and kidney disease, diabetes, etc. and will be linked to the server computer.

Surgical procedures performed in the laboratory sometimes entail unusual cases (i.e. the dog who ate a shoe, the puppy whose tummy drug the ground, the rabbit with a tumor, etc.) that provide great learning opportunities for students. We are requesting a digital camera with the capability of capturing images of these procedures in detail (macro zoom) and are requesting a printer to develop poster type presentations of these cases for students who were not there to witness them.

Patient care and monitoring are critical to the outcome of our patients and vital to the learning process for good veterinary technicians. We are requesting the latest technology in anesthetized patient monitoring, so that students will be able to follow the ECG, respiration, temperature, blood pressure, oxygen and carbon dioxide levels of each patient through the anesthesia/surgical procedure. We are also requesting funds for intravenous (IV) fluid infusion pumps in two sizes, for larger or smaller volumes to be infused accurately without danger of overhydration. And finally, IV fluid warmers are now on the market for veterinary patients, and these will help prevent hypothermia in our patients; our students will be trained on their usage in this laboratory.

3. State measurable objectives that will be used to determine the impact/effectiveness of the project.

- a. The IDEXX laboratory analyzer, computer, and printer will be installed. The remaining stand-alone equipment will be placed in the laboratory and in use by the students and faculty in veterinary patient care.
- b. Students will be instructed in the use of this equipment, and will have access to it for practical application in laboratories.
- c. Course syllabi will be updated to reflect the use of this equipment.

4. Indicate how each project objective will be evaluated.

- a. The laboratory will be inspected to insure that the requested equipment is properly placed and utilized in the course.
- b. The syllabi will be inspected and compared to the existing syllabi to insure that updated patient care techniques have been implemented in the course.

5. If funded, which NSTEP <http://www.nsula.edu/nstep/NSTEP.pdf> objective(s) will this funding of this project advance? How will funding of the project advance the University and College/unit technology plan?

- a. This project will advance the following NSTEP objectives:
1. *To improve access to technology by students, faculty, and staff at Northwestern State University.* Specifically, to expose students to modern laboratory equipment, train them in its use, and give them basic experimental skills required in post-graduate careers.
 3. *To upgrade laboratories with modern technology.* Specifically, to use modern instruments appropriate in complexity for the current "state-of-the-art" in veterinary medicine and technology.
 9. *To provide and support hardware and software upgrades, new hardware and software for specialized functions, training for technical support personnel.* Specifically, the equipment items requested all represent functions specialized for modern veterinary medicine and the training of personnel for the workplace.
- b. This project will advance the following University and College of Science and Technology goals:
1. *Northwestern State University will endeavor to create and maintain a responsive, student-oriented environment.* Specifically, by providing the latest technological advances in veterinary medicine to student instruction, we will respond to the student's need to be well educated.
 2. *Northwestern State University will provide programs, services, and operations throughout the University of high quality and effectiveness.* Specifically, the Veterinary Technology program is fully accredited by the American Veterinary Medical Association. The next site visit is scheduled for September of 2009. Providing modern technological equipment for student instruction says that we care to provide a high quality educational experience for our students, so that they will be well prepared for board examinations and a career in veterinary medicine.

6. Provide a justification for funding of this project. Estimate the number of student that will be served per academic year and in what ways. Please indicate also any unique needs of the target group.

Veterinary medicine capabilities and technologies continue to advance at a rapid rate; this fact requires that we who are teaching and training Veterinary Technicians keep pace with advancements if we are doing what is best for our students. The Veterinary Technology Program enrollment varies from about 60-80 students total at any given time, and each of these students is required to take the surgery/anesthesia lecture and laboratory in their last year of coursework before a semester-long internship. The course enrollment typically is 18-28 students/semester.

The NSU Veterinary Technology Program is one of only two accredited programs available in the State of Louisiana, and serves to educate students who will become Registered Veterinary Technicians after successfully completing the National Veterinary Technician Examination and applying for registration. This program helps fill a nation-wide shortage of veterinary technicians (this career was listed as a top ten career for the coming years by MSN). It is a necessity that we have the equipment available to train our students well, so that they will be prepared for their internship and their role in the workplace.

7. List those individuals who will be responsible for the implementation of the project/initiative and indicate their demonstrated abilities to accomplish the objectives of the project.

Dr. Brenda Woodard will be responsible for the implementation of this project. She will be assisted by Dr. James Woodard, and Ms. Jessica Hudspeth, RVT in instruction in this laboratory. Because of the intensive nature of this laboratory, each session is team taught with all three instructors present.

8. Describe any personnel (technical or otherwise) required to support the project/initiative.

Technical personnel will be required only to set up the computer and software with the server link. The remaining equipment is "stand-alone" and veterinary technology faculty/staff will become familiar with its use and instruct each student in its use.

9. Provide a schedule for implementation and evaluation.

Equipment will be installed and in use shortly after purchased. The next course sessions are scheduled for the Spring semester of 2009, and use will be fully implemented as soon as funding has been provided and the purchasing process is complete.

10. Estimate the expected life of hardware and software. Explain any anticipated equipment/software upgrades during the next five years.

The expected lifespan of the equipment requested is ten years plus with the exception of the computer and printer, which may need replacement within five years. All specialized software upgrades for the requested hardware are provided free of charge from the vendors. The IDEXX company provides the veterinary management software to our institution free of charge.

11. Explain in detail a plan and policy that will be in place to ensure property security/controls for any equipment received through a Student Technology Fee. If you are requesting equipment that will be either/or checkout to students or moved within the department, you must provide a checkout/loan policy.

The Veterinary Technology Surgical Suite is kept locked when not in use for teaching or veterinary procedures. All equipment requested will be placed in this laboratory with the exception of the clinical chemistry analyzer which will be placed in the clinical pathology laboratory and linked by computer to the surgery laboratory. This laboratory is also locked when not in use.

12. Detailed budget include all specs, pricing and vendors. Any incomplete proposal will be returned.

The budget summary is as follows. Attached are more detailed specifications, quotations, and vendor information.

1. (1) Canon EOS Digital Rebel XTi 10.1 MP SLR Camera w/ lenses (EF 50 mm macro & 28-135 mm zoom) and SD Flash Card Vendor: Dell State Contract	\$ 1,262.03
2. (1) Dell OptiPlex 755 Small Form Factor Desktop Computer w/ monitor Vendor: Dell State Contract	1,321.02
3. (1) MS Office Professional Plus 2007 software license Vendor: Software House International	52.92
4. (1) HP Officejet Pro K8600dn color printer w/ ink cartridges Vendor: WSCAII State Contract	379.00
5. (1) Catalyst Dx Clinical Chemistries Analyzer Vendor: IDEXX Laboratories	17,995.00
6. (2) Cardell MAX-12 HD Monitors w/ 12.1" color screen/printer; BP/SpO2/3-lead ECG/CO2/Resp/Temp/rolling stand @\$7,065 each Vendor: Sharn Veterinary, Inc.	14,130.00
7. (1) TidalGuard Sp Handheld Capnograph/Pulse Oximeter Vendor: Sharn Veterinary, Inc.	2,245.00
8. (2) Versaflo VF1000 Volumetric IV Fluid Pumps @ \$688 each Vendor: Sharn Veterinary, Inc.	1,376.00
9. (2) Versaflo VF300 Microinfusion Syringe Pumps @ \$627 each Vendor: Sharn Veterinary, Inc.	1,254.00
10. (3) i-Warm IV Fluid Warmers @ \$349 each Vendor: Sharn Veterinary, Inc.	<u>1,047.00</u>
Total:	\$41,061.97

Attach two (2) letters of support for the project from the following individuals: the requesting department's Dean, the appropriate Vice President (for non-academic units), or the SGA President from the requesting campus (for student requests).

Letters from Dr. Austin Temple, Dean of Science and Technology and Dr. Zafer Hatahet, Department Head of Biological Sciences are attached.

Introducing the Cardell® MAX-12 HD Multiparameter Monitor with PC Connectivity and Networking

High Definition 12.1" Screen

Packed with extras plus the usual Cardell "world class" technologies

The Cardell MAX-12 HD contains the world leading Cardell veterinary blood pressure technology, Nellcor's all-digital Oximax™ pulse oximetry, and Oridion's Microstream™ CO₂ technology. These are complimented by a diagnostic quality ECG, respiration via CO₂ and temperature.

The MAX-12 HD is flexible in that you can choose the monitor with or without invasive blood pressure and multi-gas monitoring. Most parameters have custom algorithms developed especially for veterinarians.

The 12.1" color display is high definition and can be viewed from an extremely wide angle. And up to 8 waveforms can be viewed at one time, including 4 ECG waveforms.

The monitor stores 120-hours of graphic and tabular trend information including a 12-minute ECG waveform you can review. An esophageal ECG is also available (free during introduction).

A port is available for downloading graphical trends and numerical data to your PC, or for creating a central monitoring system. And there's a video output connection for displaying the data on a larger monitor.

The menu is extra user-friendly with monitor and patient settings easily changed.

SHARN
VETERINARY, INC.
THE MONITORING COMPANY

1-866-Hi Sharn (447-4276)

Cardell® MAX-12HD Veterinary Monitor

Download Data to PC and Create Network

With optional software, the MAX-12HD allows you to easily download graphical results and numerical data to your PC with a serial or ethernet cable, and you can create a central monitoring network via direct connection. There's also a video output connection for displaying the data on a larger monitor.

Clear, Crisp 12.1" High Definition Screen

The MAX-12HD color display has a super wide viewing angle of 120 degrees so you can see it from almost anywhere. And the color coded numbers help you spot the parameter you're looking for. Up to eight waveforms can be displayed at one time on the screen with up to four ECG waveforms.

Easy to Use Menu Setup

Just rotate the Menu knob and the function will appear at the bottom of the screen. An arrow will point to each function as the knob is turned. You select that function by pressing the knob. It's as easy as that! Also, any settings you make will remain unchanged even after you turn the monitor off. And there's a Big Font mode for long distance visibility.

IBP and Anesthetic Agent Monitoring Options

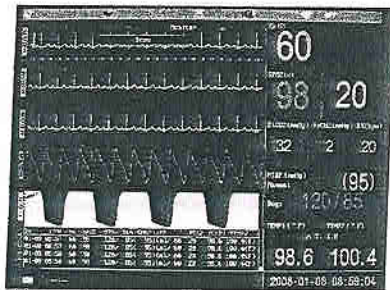

You can order the MAX-12 with an invasive BP option and/or a multigas monitoring option. Included accessories are the pressure transducer and IBP cable and/or a multigas probe.

Built-In High Resolution Printer

The thermal array recorder will print the history data for all parameters in increments of four minutes, and print three waveforms. One channel can be used for the ECG waveform and another can be used for a waveform of the SpO₂, CO₂, Respiration, or Invasive BP. Also, when an out-of-limit alarm occurs, the monitor can automatically activate the printer to print the waveform.

Enhanced Trends Easily Accessed

Just press Trend Display to see up to 120 hours of monitoring history for quick patient assessment. You can set the trend display to read in hourly segments - 2, 4, 8, 24+. Time stamps on the screen help you identify the areas for review. A 12 minute full-disclosure ECG waveform recall helps you scroll through past waveforms to find the times you want to check. You can even focus on a single QRS complex and use on-screen calipers to measure and analyze it.

Veterinary Specific Alarm Defaults

Designed for use specifically in veterinary medicine, the Cardell MAX-12 comes with four default alarm settings configured for dogs, cats, horses and other. Alarm limits can be changed at any time and the monitor will remember these changes the next time the monitor is turned on.

BP Cuffs

Now! An economical big screen multiparameter monitor with all the Cardell® "world class" technologies.

Reliable Blood Pressure Readings in Kittens to Horses

The Cardell BP technology has earned a reputation for providing reliable readings in kittens to horses because of the special algorithms developed for animals. Other BP monitors just don't compare.

Besides helping you detect and manage hypotension during surgery, and assess anesthetic depth, you can use it to find, assess and treat primary or secondary hypertension. And then it can assess results of drug and/or diet therapy for hypertension.

Other aspects of the blood pressure component:

- Provides systolic, diastolic, mean arterial pressure in about 20 seconds...hands free.
- STAT mode provides continuous readings for five minutes with 10 second pause between.
- AUTO mode lets you set the monitor to automatically take a pressure every minute, two minutes, three minutes, etc.
- Pulse rate range from 20 to 300 beats/min.
- Stores 600 readings and the last 24 hours of trends.
- 13 cuffs in 7 different sizes included to help you get the most accurate BP.

SpO₂ from Nellcor, the World Leader And Inventor of Pulse Oximetry

Nellcor's all-digital OxiMax® technology provides the most accurate SpO₂ readings available. This special new technology gives you SpO₂ values even in low perfusion and during patient motion, and when you need it most - when your patient is in trouble!

A lingual sensor is provided along with two sizes of clips. A reflectance sensor is also available for use on the tail during dentals or head and neck surgery.

Diagnostic Quality ECG

The monitor comes with a 3-lead system, but a 5 lead set can be chosen. Other features include:

- electrical interference protection
- 4-channel ECG waveform and enlarged waveform display option
- 12-minute ECG waveform storage recall to review any abnormal ECG
- Displays up to 4 different leads
- Esophageal ECG (free during introduction)
- 3 sensitivity levels

Microstream® CO₂ Technology Offers Accuracy in Small Patients

The Oridion Microstream technology overcomes the limitation found in other sidestream CO₂ monitors. It has a low sample flow rate of 50 ml/min to eliminate problems associated with monitoring CO₂ in animals with small lung volumes...probably half your patients! The 50 ml/min sample flow rate, along with the filter, also reduces the potential moisture problems in the sample line.

Since the sensor is within the monitor, it is protected from damage. Three Microstream FilterLine sets are included: two regular size, and one for very small animals and exotics with dead space as low as .35 ml. Therefore, EtCO₂ can be measured accurately in all patient sizes.

Temperature & Respiration

Core body temperature measurements are available through a YSI 401 Series esophageal/rectal probe. A second temperature connection is also available. Alarms may be set for each temperature channel. Respiration is derived from the CO₂ line. Alarms can be set.

Mounting Solutions Available
The Cardell MAX-12HD Monitor can be mounted with the following accessories available from SHARN Veterinary.

Optional Wall Mount Recorder #Mount 4F

Optional Rolling Stand with Accessory Basket Recorder #Mob.64A

Technical Specifications

Non-Invasive Blood Pressure

Measurement Technique: Oscillometric
Parameters: Systolic, diastolic, mean arterial pressure
Modes: Manual, Auto Cycle, STAT (5 min. consec.)
Determination Time:
- Small Cuff: 18 seconds typical @160 BPM
120/80
- Large Cuff: 26 seconds typical @75 BPM
120/80
Maximum time allowed: 150 seconds
Initial Inflation: 150 mmHg; subsequent inflations to approx. 30 mmHg greater than previous systolic pressure.
Blood Pressure Range: 20-265 mmHg
Pulse Rate Range: 20-300 beats per minute
Accuracy: In humans is shown to be +/-5 mmHg with standard deviation no greater than 8 mmHg. Meets AAMI/ANSI SP10, '02. Animal types vary.

Invasive Pressure - 2 Channels (Optional)

Frequency Response: dc to 12 Hz
Input Impedance: 500 KW
Accuracy: +/-2%

Pulse Oximetry - Nellcor

Pulse Rate Range: 35 - 250 bpm
Pulse Rate Accuracy: +/-3 bpm
SpO₂ Range: 0 - 100%
SpO₂ Accuracy:
- Large Animal: 70-100% +/-2 digits
- Small Animal: 70-95% +/-3 digits
Sensors: Nellcor VetSat & MaxFast

ECG

3 Lead: I, II, III
5 Lead: I, II, III, aVR, aVL, aVF, V
Patient Cable: 6-Pin AAMI Standard

Freq. Response: Display: Filtered: 0.5 to 35 Hz
Diagnostic: 0.05 to 100 Hz
X1000 Output: Filtered: 0.5 to 35 Hz
Diagnostic: 0.05 to 100 Hz
Defibrillator Protection: Yes
Electrosurgical Interference Protection: Yes
Accuracy: +/-1 BPM
Heart Rate Average: 8 beats
ECG Display: 4 channels
Sweep Speed: 12.5/25/50 mm/s

Temperature - 2 Channels

Thermistor Type: YSI Series 400 or equivalent
Range: 9°C to 50°C
Accuracy: +/-1°C from 25°C to 40°C

Respiration

Size Adjustment: Manual
Update Time: Approx. 2 seconds

End Tidal CO₂ - Oridion

Type: Sidestream
Response Time: 2.0 sec.
Range: 0-99 mmHg
Accuracy: +/-2 mmHg or +/-5%
Breath Rate: 0-150 bpm

Multi-Gas (Optional)

Methods: Infrared absorption
Gas: N₂, CO₂, Des, Iso, Ent, Sev, Hal.

Trends

Intervals: 2, 4, 8, 24 Hours
Heart Rate: Up to 120 hours averaged trend
NIBP: Last 600 readings, tabular
SpO₂: Up to 120 hour averaged trend
Review Trend Mode: Displays 120 hrs of HR, RR, SpO₂, and IBP in two windows - 2, 4, 8, 24 hour view

Display

Type: Active Matrix TFT color LCD
Screen size: 12.1" Diag.
View Angle: 120° Horiz. & Vert.
Sweep Speed: FCG: 50, 25, 12.5 mm/s
Channels: 6-8

Printer

Type: Thermal
Number of traces: 3
Speeds: 12.5 & 25 mm/s
Mode: Waveform & Data

Battery

Type: Lead acid
Operating Time: up to 3 hours
Normal Charge Time: 12 hours

Power Requirements

Voltage Input Range: 100-230 Vac, 50-60 Hz

Communications

Analog Outputs (worldwide): 13
Serial Ports: RS422, USB, RJ45 (ethernet port),
VGA output port

Mechanical

Size: 10.5"H x 11.5"W x 5.25"D
Weight: 16 lbs.

Safety

Unit meets or exceeds the specifications for the AAMI cardiac monitor standard, IEC 60601-1, CE0145, EN 9001 & ISO 13485 certified

Warranty

Two years (parts and labor), except accessories.

MAX-12 HD Cardell Multiparameter Monitor with Integrated Printer.
BP/SpO₂/3-Lead ECG/CO₂/Resp/Temp
MAX-12 HDi Cardell Multiparameter Monitor w/Invasive BP
MAX-12 HDm Cardell Multiparameter Monitor w/ Multigas Monitoring.
MAX-12 HDim Cardell Multiparameter Monitor w/Invasive BP and Multigas Monitoring.

Complies with international standards:
ISO 9001 and EN46001 Certificate.

Capnography: Improving anesthesia safety...and then some.

TidalGuard™ Sp Hand-Held, Mainstream Capnograph and Digital Pulse Oximeter

The TidalGuard Sp offers accurate, reliable CO₂ monitoring in a convenient, portable package. It's designed to provide immediate clinical feedback of actual expired and inspired CO₂.

The TidalGuard Sp helps provide critical information during anesthesia, e.g. depth of anesthesia, cardiac output and perfusion, reliable respiration, etc.

- Unbreakable, self-calibrating, solid state sensor.
- Diagnostic CO₂ waveform.
- Adjustable alarm limits for all four parameters.
- Adjustable alarm volume; 2 min. silence or OFF.
- 24-hour trending memory.
- 30 minute on-screen graphic trend available in trend or tabular mode.
- Visual and audible "No Respiration" alert provides for a higher level of patient safety.
- Display is visible in any lighting condition - from total darkness to bright lighting.
- Prints via RS232 port to Seiko SPU 414 printer.
- Weighs just 28 ounces.
- 4.5 hour rechargeable battery or optional external AC power supply.
- Has ISO 9001, CE, and UL approvals.
- 3-year warranty on monitor.

• EtCO₂ • SpO₂
• Respiration • Pulse Rate

Specifications

Exclusively for Veterinarians

General	
Electrical	
External Power Supply:	Includes AC adapter/charger
Input:	100 - 250 VAC, 50 - 60 Hz
Battery:	Nickel-metal-hydride: 4.5-hr life Standard AA lithium: 5.5-hr life
Environmental	
Operating Temperature:	32 - 104° F (10 - 40° C)
Operating Humidity:	0 - 90% relative (non-condensing)
Capnograph	
Principle of Operation	Solid state mainstream sensor. Single beam, non-dispersive infrared (NDIR) absorption, ratio-metric measurement.
Initialization Time	Capnogram within 15 seconds, full specifications within 60 seconds
Calibration	No calibration required
Capnostat Mainstream CO2 Sensor	
Size:	1.30" H x 1.67" W x .85" D (3.30 x 4.24 x 2.16 cm)
Weight:	64 oz (18 gm) - cable excluded
Shock Resistance:	Withstands repeated 6 ft drops
CO2 (Carbon Dioxide)	
Range:	0 - 150 mm Hg, 0 - 19.7%, 0 - 20 kPa at 760 mm Hg Pb
Accuracy:	±2 mm Hg (0 - 40 mm Hg) ±5% of reading (41 - 70 mm Hg) ±8% of reading (71 - 100 mm Hg)
Resolution:	1 mm Hg
Response Time:	60 ms
Units:	mm Hg, kPa or %
Compensations:	N2O & O2 (selectable), Pb (automatic)
Capnogram:	Selectable sweep speed
Respiratory Rate	
Accuracy:	±1 bpm
Range:	0 - 150 bpm
Resolution:	1 bpm
Pulse Oximeter	
Principle of Operation	Red/Infrared absorption (Oxygen Saturation)
SpO2	
Range:	0 - 100%
Accuracy:	±2% SpO2 (for 70 - 100% SpO2) (1 SD) Unspecified for 0 - 69% SpO2
Resolution:	1%
Averaging:	Menu selectable 2 or 8 seconds
Audio:	Pitch of pulse tone varies with SpO2 value
Pulse Rate	
Range:	30 - 250 bpm
Accuracy:	±1% of full scale
Resolution:	1 bpm
Averaging:	8 seconds
Sensors	
	Reusable V-Sensor™ (can be sterilized and used with all patient populations)
Plethysmogram	
	Pulsatile waveform

Affordable and Reliable Versaflo™ Syringe Pumps

Versaflo 300

Micro-Infusion Syringe Pump

- Useful for antibiotics given over long period
- For 20ml, 50/60ml & 100ml disp. syringes
- Infusion Options:
 - 0.1 - 150 ml/hr with 20 ml syringes
 - 0.1 - 300 ml/hr with 50/60 & 100 ml syringes
- Four audible & visual alarms
- Battery, built-in recharger & AC power
- I.V. pole clamp included
- Optional 12V adapter
- Weighs 5.5 lbs.

Versaflo 200

High Volume Syringe Pump

- Useful for high rate drug infusions and nutritionals
- Flow rate of 60 - 1500ml/hr
- Uses 20, 50/60 & 100ml disposable syringes
- Automated calculation of delivery rate based on time pre-selection (4, 8, 12, 16, 20 minutes)
- Four audible and visual alarms
- AC power w/rechargeable battery
- Weighs 4 lbs.
- Use to supplement Versaflo 300

Versaflo 100

Syringe Pump for Small Dosage

- Useful for chronic cancer patients, CRIs, pain control and insulin
- Uses 2 - 12ml disp. syringes
- Delivers 1 - 99 mm/hr (equates to 0.2 - 20 ml/hr)
- "Complete/Occlusion" & "Low Batt" alarms
- Weighs only 1/2 lb.; uses 3 AA batteries
- Small, light and completely portable
- Rent to clients for long term therapy

New! Economical Fluid Warmer with Temperature Display for Standard I.V. Sets

i-Warm™ Fluid Warmer

Features

- Portable and lightweight
- Convenient hanging belt to hang on I.V. pole
- Current temperature displayed in Fahrenheit or Celsius
- Temperature overheating protection
- Indicators for warming (orange), power (green), and overheating (red)

Benefits

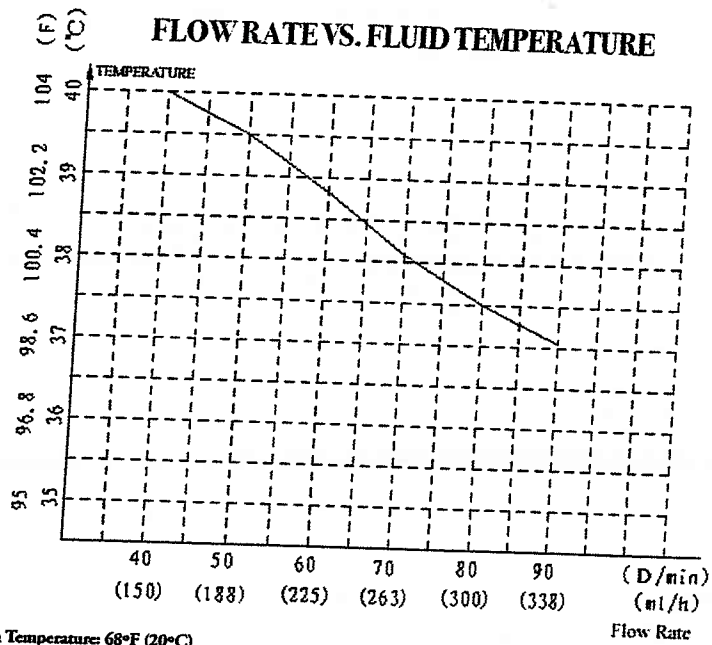

- Reduces prep time to warm fluid
- Can monitor temperature second to second
- Reduces patients' discomfort due to cold fluid
- Compatible with standard I.V. sets
- Quickly brings the temperature of the fluid up to the patient's

Ms. Jennifer Long Martin
Student Technology Office
Watson Library

Ms. Long,

I am writing in support of Dr. Brenda Woodard's Student Tech Fee grant proposal to update the surgery/anesthesia facility in the Veterinary Technology Program of the Department of Biological Sciences. In order to be competitive in the job market, our graduates need to be familiar with the technology commonly used in veterinary clinics. The requested equipment fall in this category and are essential for proper training of our students. Dr. Woodard's program has a near perfect record of job-placing its graduates and funding of this grant would help maintain this record. Finally, all of the equipment currently available in the Vet Tech program are used extensively and kept in excellent condition, a testament to Dr. Woodard and her students.

Thank you.

Sincerely,

A handwritten signature in black ink, appearing to read "Zafer Hatahet".

Zafer Hatahet, Ph.D.
Professor and Chair

COLLEGE OF SCIENCE & TECHNOLOGY
OFFICE OF THE DEAN

October 30, 2008

Student Technology Fee Grant Proposal Committee

Dear Committee Members:

I am pleased to write this letter of support in behalf of a grant proposal written by Dr. Brenda Woodard. Dr. Woodard is proposing to purchase equipment to modernize the surgery/anesthesia laboratory which is used in the Veterinary Technology degree program. It is very important that our students receive training using current technology and equipment. The purchase of this equipment will insure that our students are receiving state of the art training. This laboratory is offered every semester and the individual enrollment each semester varies from 18 to 28 students.

Thank you for serving on this very important committee and for your consideration of this proposal.

Very truly yours,

Austin L. Temple Jr., Ph.D.
Dean, College of Science and Technology
