Section 13: Server Management

Information Systems is ultimately responsible for the management of all servers connected to the Northwestern network. All such servers will adhere to the provisions of this policy.

Scheduled Server Maintenance

Weekly server maintenance will be conducted between the hours of 12:00PM to 1:00PM on each Friday. Routine updates and patches will be installed at this time. Maintenance work that requires more time to complete will be scheduled and announced to the University community in advanced. Every effort will be made to ensure such maintenance windows have the least amount of impact on the University community.
